

Preservation Best Practices 3D Methods and Workflows: Photogrammetry Case Study (Repository Perspective)

Kieron Niven
Digital Archivist, Archaeology Data Service

13th August 2018

Same basic structure but:

- From the perspective of a repository:
 - What do we need to know about a photogrammetry project and the associated data
 - How this should be deposited, structured, archived
- Largely looking at **Photogrammetry...**
- Many of the points are equally applicable to other data types (laser scan, CT, etc.)

Planning Phase

- Engage with project at point of start up / data creation - advise on suitable formats and metadata
- Aim to exploit exports and tools for recording metadata.
- Not always possible (legacy projects). Relevant project documents, reports, methodology, process, etc. Should also be archived to describe as much as possible of the project design, creators, and intentions.
- Data should be linked to wider context through IDs, DOIs, references (external documents, creators/source of data, monument ids, museum ids, etc.)

Planning Phase

- Planning phase is the most important phase
- Both 'Purpose' and 'Audience' will influence what is recorded, how it's recorded, and what are produced as final deliverables (e.g. LOD, opportunist/planned, subsequent file migrations, limited dissemination options).

ACCORD: Project documentation.

Ingest is where it all begins (for us):

- Specify ingest file formats (limit diversity and future migration, ease metadata capture)
- Aim to ingest as much metadata and contextual info as possible. Recorded on a number of levels:
 - Collection level (people, funders, rights, dates, assoc. publications, etc.)
 - File level (name, description, caption, terms, etc.) e.g. photogrammetry exif data. OBJ descriptive metadata.
 - Technical metadata (file size, type, processing, relations)

PIP: Planning deposition (files):

Ideally, repositories should be aiming to:

- Preserve and disseminate data ‘in perpetuity’
- Ingest & preserve **raw data** (TIF or JPG images as captured, no proprietary formats) and **processed data** (OBJ)
- Any control information (any reference data which is then processed by the software)
- Where needed, ingest **intermediate datasets** (pointclouds, cleaned data)
- Either ingest or create **dissemination versions** of data
- All processes are documented (CMS)

Metadata at Ingest:

Two main categories of metadata used at ADS:

User supplied and **repository created**. Repository generated includes: file checksums, identification, path, etc. (the things that allow us to manage any files on our system)

Majority at **ingest** is user supplied (Collection-level, dataset-level, technical acquisition and processing-level)

Use in-house standards and data-specific options (exif, processing reports from software, etc.).

Metadata at Ingest:

Variety of metadata displayed alongside the archive material

Project dates	Created From	14-DEC-2016
	Created To	10-MAR-2017
	First Released	22-NOV-2017
	Intervention Date From	14-DEC-2016
	Intervention Date To	10-MAR-2017
Data types available	3D Model	3 objects
	Image	886 objects
	Spreadsheet	2 objects
	Text	2 objects

Crystal Palace Iguanodon condition survey

Location	World region	British Isles and Ireland
	British Isles country	England
	English region	London
	County	Greater London
	District	Borough of Bromley
	Place	Crystal Palace Park
	TGN	World, Europe, United Kingdom, England, Greater London, London Borough of Bromley [7026510]
Grid reference	Latitude Longitude	170516 534500
Grid reference	Latitude longitude bounding box	51.417733 -0.067213811 -0.0671138 51.417698
	Event Type (England)	PHOTOGRAMMETRIC SURVEY
Subject	Library of Congress Subject Headings	Dinosaurs
	Library of Congress Subject Headings	Crystal Palace (Sydenham, London, England)
	Library of Congress Subject Headings	Iguanodon
	Monument Type (England)	SCULPTURE
	Monument Type (England)	STATUE
Period	MIDAS	Modern
	Period (England)	VICTORIAN
Project dates	Created From	14-DEC-2016
	Created To	10-MAR-2017
	First Released	22-NOV-2017
	Intervention Date From	14-DEC-2016

Processing Metadata:

Photogrammetry metadata should cover:

- Capture (camera details, control, survey details)
- Processing (either documented or as a software report)

We retain embedded or sidecar data but both require documentation to (a) flag up they exist and (b) their relationship to the data file(s) as, if not clear, this data could be lost during future migrations.

Processing Metadata:

Many photogrammetry packages allow metadata exports documenting creation and processing.

Processing Parameters

General	
Cameras	19
Aligned cameras	19
Markers	4
Coordinate system	OSGB 1936 / British National Grid (EPSG:27700)
Point Cloud	
Points	1,003 of 3,059
Reprojection error	0.406569 (0.952276 max)
Effective overlap	7.00588
Alignment parameters	
Accuracy	High
Pair preselection	Generic
Key point limit	40,000
Tie point limit	1,000
Constrain features by mask	Yes
Matching time	2 minutes 1 seconds
Alignment time	1 seconds
Optimization parameters	
Parameters	f, b1, b2, cc, cy, k1-k3, p1, p2
Optimization time	0 seconds
Dense Point Cloud	
Points	4,282,655
Reconstruction parameters	
Quality	Medium
Depth filtering	Aggressive
Dense cloud generation time	16 seconds
Model	
Faces	370,263
Vertices	186,105
Texture	6,048 x 6,048, uint8
Reconstruction parameters	
Surface type	Arbitrary
Source data	Dense
Interpolation	Enabled
Quality	Medium
Depth filtering	Aggressive
Face count	859,961
Processing time	4 minutes 4 seconds
Texturing parameters	
Mapping mode	Generic
Blending mode	Mosaic
Texture size	6,048 x 6,048
UV mapping time	12 seconds
Blending time	42 seconds
Orthomosaic	
Size	6,108 x 6,224
Coordinate system	OSGB 1936 / British National Grid (EPSG:27700)
Channels	3, uint8
Blending mode	Mosaic
Reconstruction parameters	
Surface	Mesh
Enable color correction	No
Processing time	1 minutes 29 seconds
Software	
Version	1.2.6 build 2834
Platform	Windows 64 bit

Quality Report 

Generated with version 1.2.36

Summary

Project	Ashnott
Processed	2014-Nov-21 13:58:55
Camera Model Name	CanonEOS125HS_4.3_4608x3456 (RGB)
Average Ground Sampling Distance (GSD)	3.33 cm / 1.31 in
Area Covered	0.3566 km ² / 35.6783 ha / 0.1378 sq. mi. / 88.2065 acres
Image Coordinate System	WGS84
Ground Control Point (GCP) Coordinate System	OSGB 1936 / British National Grid
Output Coordinate System	OSGB 1936 / British National Grid
Processing Type	full aerial nadir
Feature Extraction Image Scale	1
Camera Model Parameter Optimization	optimize externals and all internals

Quality Check

 Images	median of 48761 keypoints per image	
 Dataset	169 out of 169 images calibrated (100%), all images enabled	
 Camera Optimization	0.56% relative difference between initial and final focal length	
 Matching	median of 12676 matches per calibrated image	
 Georeferencing	6 GCPs (6 3D), mean error = 0.019 m	

Preview

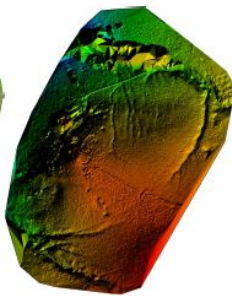

Figure 1: Orthomosaic and the corresponding sparse Digital Surface Model (DSM) before denoising.

(PhotoScan, Pix4D reports)

Dissemination:

- Key to engage and see how people need access to the data
- Issues with giving access to raw data
 - Large no. of images (and in knowing how people want to access them, granularity of access vs. use)
 - Large file sizes
- Online viewing (and basic manipulation) of models now commonplace (ADS uses 3DHOP, many use Sketchfab) – Increased user expectations?

Long-term Management

- Key to know what you hold, especially for 3D formats
- Essential to maintain an ongoing ‘watch’ on formats – both preservation and dissemination (key repository task)
- Maintenance of online viewers and external hosts
- Maintenance and access to metadata (stored in a database or file?)
- Exit strategy for repository / external deposition:
 - How easy is it to pass on your data?
 - ...and your documentation?
